AGENDA

1. Welcome and Introductions
2. Establish Quorum
3. Approval of September, November & January Minutes
4. NEW BUSINESS
 - * Presentation from Department of Public Health - E-cigarettes
 - * Discussion on requested data from DMS
 - * Topics for 2020 meetings
 - Pending: topic ideas - CBD, vaccines, school safety
 - * Updates from the MAC
 - * Roundtable Updates/concerns from each member/professional organization
5. OLD BUSINESS:
 - * Autism Spectrum Disorder
 - * Psychopharmacological prescribing for KY children
 - * School-based services and Free-Care Rule
 - Presentation from Alicia Whatley
6. MCO Updates/Questions or Data Request Reporting
7. General governance issues
8. Other Business
9. Action Items
10. Adjourn

1 MS. KALRA: We can go ahead and
2 get started and do welcome and introductions.
3 Thanks, everyone, for being here. I know there's a
4 lot going on, a lot of different things happening.
5 So, thank you for being here.

6 (INTRODUCTIONS)

7 MS. KALRA: So, we clearly don't
8 have a quorum.

9 DR. GRIGSBY: Will we ever have
10 a quorum again?

11 MS. KALRA: I would love one.
12 I've been trying.

13 MS. HUGHES: I have, too.

14 MS. KALRA: So, I think if
15 members could reach out to other members or at least
16 be active via email so that way it's on top of their
17 radar, that would be great because we have so many
18 things that we need to approve and move forward that
19 we bring to the MAC and we have yet to do that this
20 year and the end of last year.

21 So, again, anytime you see an
22 email or outreach from us, please respond and at
23 least keep things moving. And if you know any of
24 these individuals well enough, bug them as well.

25 MS. HUGHES: And if you hear

1 that they don't want to continue to be on the TAC,
2 let us know and I will reach out to their
3 association.

4 I don't want to just
5 automatically reach out but if they don't want to
6 participate, and obviously it's up to you all if you
7 want us to, after so many meetings of them not
8 coming, you want to consider having the association
9 assign somebody else who maybe can come because it is
10 bad that you all are not getting a quorum.

11 MS. KALRA: We want these
12 meetings to be meaningful. That's why they're
13 established so that way we can provide some
14 recommendations to the MAC and make a dent in at
15 least administrative policy.

16 So, again, that's the
17 importance and goal of this group. So, if we could
18 just encourage our fellow members to be active and
19 engaged so that we aren't wasting our time as well
20 and the drive because I know you both have driven
21 from various parts of the state, I think that would
22 be great.

23 MS. HUGHES: And before we start
24 into the new business, I can't remember when the last
25 meeting was and if Lisa Lee had already been

1 appointed.

2 MS. KALRA: Yes.

3 MS. HUGHES: Had she already
4 started?

5 MS. KALRA: I don't think she
6 started yet. It was right before she was about to
7 start, like a week.

8 MS. HUGHES: Okay. She did want
9 me to let everybody know that she was sorry she
10 wasn't going to be here today but just to remind you
11 all - children are her heart in the Medicaid Program.
12 She was the Kentucky Medicaid KCHIP Director for
13 several years.

14 So, this is a committee that is
15 probably near and dear to her heart than any other
16 TAC because of her love for children. When she used
17 to be here, she would always go around saying and
18 babies can't help what they've got. They've got to
19 be taken care of. So, she just wanted me to let you
20 know she will be here at the next meeting.

21 MS. KALRA: That would be great.
22 Thank you.

23 Let's go ahead and move into
24 New Business. So, on our radar that all the TAC
25 members discussed and mentioned is vaping and vaping

1 resources and who better to have than Elizabeth to
2 give us all the resources and knowledge. So, I will
3 let you have it from here.

4 MS. ANDERSON-HOAGLAND: Sure.
5 So, I'm Elizabeth Anderson-Hoagland with the
6 Department for Public Health. I am with Health
7 Promotion but I was the Prevention Coordinator for
8 the Tobacco Prevention and Cessation Program for
9 seven years.

10 As you know, vaping has come up
11 pretty quickly. It's been something that we've been
12 kind of taking a multi-prong approach. And I
13 apologize I didn't bring more handouts. My kid is
14 actually home sick today, so, I made some handouts
15 and I didn't make other handouts. It's not
16 coronavirus. We checked.

17 So, I guess the thing - and for
18 those of you work directly with kids, you know this -
19 when we're talking about vaping, we're not talking
20 about a single product, a single device. We're
21 talking about a multitude of devices, and the types
22 of vaping devices that are out there are evolving
23 consistently and constantly.

24 And if you look at the
25 legislation that has come out or the regulation that

1 has come out on the federal level, they're clearly
2 playing whack a mole. They're like going after one
3 particular product. They're going after Juul because
4 that's what all the kids were using. We're going to
5 take down Juul.

6 Well, kids aren't going to
7 stick with Juul if it goes away. They're going to
8 start using a different product. So, now it's Puff
9 Bars. Kids in California are using Puff Bars, these
10 single-use disposal products that look like a Juul,
11 have all the fun flavors that Juul used to have, have
12 all of the strong nicotine content that Juul used to
13 have but they're a disposable product.

14 MS. KALRA: And they look nice.

15 MS. ANDERSON-HOAGLAND: And they
16 look pretty. And, so, the federal regulation, in
17 case you all aren't staying on top of the news the
18 same way I am, the federal regulation says that pod-
19 based E-cigarette products cannot be sold in non-
20 tobacco or non-menthol flavors.

21 So, that means something like a
22 Juul where you have the little pod that you click
23 into the device and you inhale the liquid. That can
24 only be sold in tobacco flavor or menthol flavor.

25 Why is there a menthol

1 exemption? Because menthol is really good for
2 initiation of tobacco products. It numbs the throat
3 and numbs your sinus passages, so, you don't notice
4 how harsh the product is and this is true for
5 cigarettes. This is true for smokeless tobacco.
6 This is true for E-cigarettes. So, menthol is good
7 like that.

8 There's also some research that
9 menthol, the way it activates the brain pathway, is
10 similar to the way nicotine activates some of the
11 brain pathways. So, menthol can actually enhance the
12 impact of nicotine.

13 So, anyway, at the federal
14 level, they said, well, okay, pod-based Juul, only
15 tobacco, only menthol. So, all of the kids stopped
16 using pod-based products.

17 So, if you see something like
18 Suorin Drop, that is a refillable pod. So, you take
19 your liquid and you refill the pod and you put the
20 pod in your device and you inhale the liquid. That
21 can come in bubble gum, fruit flavors. That's fine.

22 Any of the refillable products
23 like the vape pens that you've seen, the big box mods
24 that people use, those that you refill, those can
25 come in any flavor. And, then, of course, the

1 single-use products like Puff Bar, those can still be
2 sold in any flavor.

3 So, unless there's
4 comprehensiveness and policy language, you're just
5 going to see kids migrating to another product that
6 still tastes good and still has that amount of
7 nicotine that they're looking for.

8 So, why do young people use E-
9 cigarettes? This is not an analogy I came up with.
10 This is something Brian King from the CDC came up
11 with. It's like leading a horse to water and making
12 it drink. So, the horse hears about the river. It
13 goes over. It tries the river and, then, it keeps
14 drinking because it's thirsty.

15 So, if we look at kids with E-
16 cigarettes, they hear about E-cigarettes. They see
17 the advertising. They try the E-cigarette because it
18 comes in bubble gum, it comes in cherry, it comes in
19 fruit, it comes in mint. They're curious and, then,
20 they keep drinking, they keep using the product
21 because of the nicotine.

22 And what we know is Juul pods
23 have as much nicotine as one to one-and-a-half
24 packages of E-cigarettes. Like, that's the
25 equivalency.

1 If you look at the Juul knock-
2 off products that you see at the stores, they're
3 coming in even stronger strengths. And, of course,
4 these refillable liquids, they can go stronger and
5 stronger and stronger.

6 The real revolution that came
7 about with Juul, the reason Juul was so incredibly
8 popular is because the nicotine salts.

9 The oil types of E-cigarettes
10 you would have free-based nicotine which basically
11 they just like sucked the nicotine out of the tobacco
12 plant, put it in some liquid and you would inhale.
13 You'd have to heat it up and inhale it.

14 Well, one of the problems was
15 that was really harsh on your throat. The other
16 problem is it didn't absorb very well. So, you
17 needed really high temperatures to get a really good
18 nicotine hit from the free-based nicotine liquid.

19 What Juul did was create
20 nicotine salts and I don't even know all the
21 chemistry because it's been a long time since I've
22 had chemistry class, but the thing about nicotine
23 salts is they can be a much stronger concentration.
24 They don't hurt your throat in the same way that a
25 free-based nicotine is and they get absorbed into the

1 brain much faster than free-based nicotine.

2 So, if you look at nicotine in
3 the blood of someone who is using a Juul E-cigarette,
4 the nicotine in the blood mimics that of what you
5 would get from a conventional cigarette. All of the
6 C-cigarettes are much weaker.

7 So, when Juul came on the
8 market - and for those of you who have the handout, I
9 have I think it's Slide 4, we have the youth risk
10 behavior survey results for current E-cigarette use.

11 And, so, what you will see is
12 that in 2015 - that was the first year we asked about
13 E-cigarette use - 23.4%. We said, oh, no, this is a
14 problem. This is like one in five kids are using E-
15 cigarettes.

16 So, we said, oh, no, a lot of
17 kids are using E-cigarettes. We were concerned about
18 the problem. We started coming up with program to
19 combat the problem.

20 In 2017, current E-cigarette
21 use dropped to 14% and we're like, oh, good job.
22 We've solved this E-cigarette problem. We have like
23 a 9% decrease in use over two years. That is
24 phenomenal. We're great at this.

25 Well, of course, then, what

1 happened is Juul was introduced in 2016/2017. So, if
2 you look at the 2019 youth risk behavior data, it's
3 higher than it's ever been - 26%. One in four youth
4 have said that they are current E-cigarette users,
5 meaning they have vaped in the past thirty days.

6 I suspect and those of you,
7 again, who work with kids, this is probably an under-
8 representation about how many are currently using C-
9 cigarettes.

10 So, one of the reasons this is
11 problematic is, of course, how the brain develops and
12 that's one of the reasons why it's difficult to
13 address youth E-cigarette use.

14 Again, for those of you who
15 work with kids, you know the brain develops from the
16 back of the brain to the front of the brain. The
17 frontal lobe is the last to develop. That's what is
18 in charge of impulse control, long-term planning,
19 decision-making, all of those real good adult skills
20 that you need to successfully quit using because what
21 you have to do if you are addicted to a nicotine
22 product and you have to stop using it, you have to be
23 able to control your impulses not to use. You have
24 to make a plan for what are you going to do when you
25 have a trigger. You have to make a plan for what are

1 you going to do when you have a craving. Those are
2 all skills that young people really have problems
3 with which is why we have some good cessation
4 resources which I'm going to get to at the end.

5 The other thing about E-
6 cigarettes and really the industry kind of won the
7 language about E-cigarettes is we call it vaping. We
8 call it water, vaping as in water vapor.

9 Someone I know does a really
10 great visual with this. When you think water vapor,
11 you're boiling water, you're boiling water for pasta
12 and you inhale that water and you exhale, there's no
13 cloud. There's no cloud because that's what water
14 vapor does. It just dissipates into the air. You
15 don't see it.

16 However, when you use an E-
17 cigarette and you exhale, there is this giant cloud.
18 That's clearly not water vapor just dissipating into
19 the environment. What we say is that's an aerosol.
20 So, it's small particles and drops of liquid
21 suspended in a gas. So, it's more similar to hair
22 spray than it is to water vapor.

23 And the person I know, if any
24 of you know Minnie Eckus (sic) at UK, she will take a
25 soda bottle or water bottle, I guess, if you're being

1 health conscious, and you can put some water in it
2 and show that there's no visible water vapor. Then,
3 you can spray hair spray in there and you can see the
4 hair spray collecting on the sides of the bottles.
5 That's more accurately what's going on with the lungs
6 when it comes to E-cigarette use.

7 So, what is in the aerosol? Of
8 course, there's the nicotine and there's actually
9 second-hand nicotine exposure from C-cigarette use.
10 You don't inhale all of it into the lungs. You don't
11 absorb all of it in the lungs when you use E-
12 cigarettes. Some of it comes back out.

13 I'm on this Facebook group
14 talking about home renovations and there is someone
15 in their outside Florida room, well, their semi
16 outside Florida room. The husband was vaping heavily
17 and the walls were turning brown and sticky. Well,
18 that's nicotine. Nicotine is a sticky drug. It's a
19 brown drug. It's sticking to their walls. You've
20 got to clean that off. It's kind of what you would
21 see in a smoker's home.

22 So, you're clearly exhaling
23 nicotine. You're not absorbing it all when you're
24 using an E-cigarette.

25 There's ultra-fine particles.

1 The thing about ultra-fine particles, meaning very,
2 very, very small, they lodge deep into the lungs.
3 So, we know people who use E-cigarettes have a higher
4 risk of heart disease and stroke and heart attack and
5 it's probably due to these ultra-fine particles just
6 because they have been affiliated with heart disease.

7 There's volatile organic
8 compounds. There's some compounds that are found to
9 cause cancer. If you think about E-cigarettes, if
10 you've ever pulled one apart or looked at one really
11 closely, you have the liquid. You have to heat the
12 liquid up so you're able to inhale it.

13 Well, they use a little coil to
14 heat that liquid. That coil is made of metal. You
15 heat that metal up to really high temperatures -
16 five, six, seven hundred degrees. You cool it off,
17 you heat it up, you cool it off, you heat it up, you
18 cool it off every time you take a puff. That makes
19 the metal brittle.

20 So, what are they making these
21 coils out of? Nickel, tin, in some cases lead. So,
22 we know people who use C-cigarettes are getting some
23 of those metal particles into the E-cigarette
24 aerosol.

25 And, then, there's a lot of

1 worry about the flavorings used in E-cigarettes.
2 Everyone talks about diacetyl because that's one that
3 we have a lot of data on.

4 Diacetyl is used in microwave
5 popcorn. It gives it that buttery flavor. It's
6 perfectly safe to eat. It is not safe to inhale
7 because if you inhale large quantities of diacetyl,
8 it causes a type of irreversible lung damage, and I
9 could spell it but I can't pronounce it necessarily.
10 It's like bronchiolitis obliterans or something like
11 that.

12 And they found it first in
13 popcorn workers. Workers who worked in popcorn
14 plants started getting this lung disease and they
15 finally figured out it was from breathing in the
16 butter flavor.

17 So, some companies are good
18 about moving away from diacetyl. Juul said that they
19 didn't use it in their creme brulee flavors and stuff
20 like that. Some companies still use diacetyl.

21 The other thing about
22 flavorings is that E-cigarette companies will say,
23 well, we use generally-recognized safe flavorings.
24 That is a categorization by the FDA about food
25 additives that are generally recognized as safe.

1 So, if you have something -
2 cinnamon - you add cinnamon to your popcorn, that is
3 generally recognized as safe. Like, it's cinnamon,
4 folks. Like, it's okay to eat that. However, do you
5 want to inhale cinnamon? Absolutely not.

6 So, some things that are
7 generally recognized as safe for eating are not
8 recognized as safe for your lungs. So, that is a
9 real key distinction that the E-cigarette industry
10 just kind of glosses over.

11 There is a common talking point
12 for the E-cigarette industry that E-cigarettes are
13 95% less harmful than cigarettes. And, so, I have a
14 direct quote from the study that is frequently cited.

15 And the direct quote from the
16 authors is: "A limitation of this study is the lack
17 of hard evidence for the harms of most of the
18 products on most of the criteria."

19 So, what they are saying here
20 is we don't actually have data about the harms of E-
21 cigarettes, about most of the products on most of the
22 categories that we're looking at. That whole paper,
23 it was just a guess. They were guessing. And, so,
24 that is not something we can base public health on.
25 We can't base public health on a guess.

1 The other thing to know is
2 let's say E-cigarettes are 95% safer. If you look on
3 Slide 9, this is looking at conventional cigarettes
4 and heart attack risk.

5 Eighty percent of the risk for
6 heart attack risk comes from three or less cigarettes
7 a day which is why we always say that cutting back is
8 not enough. If you smoke three cigarettes a day, you
9 have 80% the risk of heart attack of someone who is a
10 pack-a-day smoker which is better but it's not good.

11 So, from a public health
12 perspective, are we willing to say, well, okay, you
13 have 80% of the risk of a heart attack? That's not
14 acceptable from a public health perspective.

15 And, then, finally, when you're
16 talking about like indoor E-cigarette use or smoke-
17 free policies or indoor air policies, the standard is
18 not is this more or less harmful than secondhand
19 smoke.

20 The standard is, is this as
21 healthy as clean air? That is the standard we should
22 be basing decisions on, not basing decisions on
23 cigarette smoke because cigarette smoke is one of the
24 most deadly substances known. Like, it kills half of
25 its users.

1 So, what can you do about it?
2 We currently have three quit lines going in Kentucky.
3 So, the first one - did everyone get one of these
4 handouts?

5 MS. HUGHES: I don't think I
6 made enough for everybody.

7 MS. ANDERSON-HOAGLAND: I've got
8 some more, Sharley, because this is good stuff. We
9 currently have three quit lines. Quit Now Kentucky
10 is our longstanding quit line. It used to be for
11 ages 18 and older. Then it was 14 and older. Now we
12 have no age limit. It is the standard quit line.
13 You would call 1/800-QUITNOW or you go to
14 quitnowkentucky.org and you can enroll.

15 We have a four-call protocol.
16 For anyone over the age of 18 who is uninsured or on
17 Medicare, we provide four weeks of free nicotine
18 replacement therapy through the quit line.

19 So, the thing is, I think last
20 year, we had six people under the age of 18 enrolled
21 in the traditional quit line. Kids don't want to
22 talk to some adult on the phone. That is not what
23 they're really interested in.

24 So, we have branched out to two
25 other options. One is My Life/My Quit which was

1 provided by National Jewish Hospital which provides
2 our quit line. It's for ages 17 and under. It does
3 have talking to adults on the phone but you can also
4 text back and forth with someone back on the phone or
5 you can email someone back and forth on the phone.
6 And, so, that is a five-call protocol.

7 We also have This is Quitting
8 which will serve anyone ages 13 to 24 but we are
9 really focusing on the 18 to 24 age range. This is
10 an automated text messaging service. So, it's not a
11 live person on the other end. It's automatic text
12 based on how you respond to the program, but this is
13 available for up to nine weeks. So, it's a really
14 long-term service.

15 This is Quitting is provided by
16 the Truth Initiative and actually has some good
17 evaluation data showing that kids who use this
18 program are quitting.

19 So, I'm going to leave that
20 with you. I highly encourage you to refer any young
21 people in your life to that.

22 The final thing I'll say is
23 nicotine replacement therapy, we can give it to
24 people who are over the age of 18. There has been
25 some back and forth about using nicotine replacement

1 therapy in people under the age of 18 and youth under
2 the age of 18, and it used to be not recommended. If
3 you think about young people, they generally would
4 not smoke on a daily basis.

5 So, it doesn't make sense to
6 slap a patch on someone who is smoking three days per
7 week because you're giving continuous nicotine as
8 opposed to the intermittent nicotine that they were
9 using before.

10 However, with the way young
11 people are using C-cigarettes, some of them are very,
12 very heavy users. If you're using two, three, four
13 pods a day, you're not going to be able to quit cold
14 turkey and be all right. You're going to need some
15 nicotine replacement therapy to wean you off of that.

16 So, nicotine replacement
17 therapy can be prescribed off label to those under
18 the age of 18. You just have to have a doctor who is
19 willing to work with the patient and their parents to
20 make sure that they are using it properly so they can
21 wean themselves off of the nicotine.

22 The last thing I have on there,
23 and I plopped this on here real quick because in the
24 fall, and actually even today, we're still getting
25 cases of EVALI, the lung injury associated with

1 vaping. The vast majority of those cases were among
2 people using THC products, though I will say that a
3 third to a half of them were also using nicotine.
4 And, unfortunately, we are still getting cases of
5 people with lung injury associated with vaping.

6 And, so, I just want to put
7 this out here that there is a way you can find
8 marijuana treatment for those who have difficulty
9 quitting vaping THC.

10 MS. KALRA: Thank you.

11 MS. ANDERSON-HOAGLAND: And
12 here's some contact information.

13 MS. KALRA: Any questions?

14 DR. GRIGSBY: The Quit Now is
15 the one that has the nicotine replacement program for
16 those over 18?

17 MS. ANDERSON-HOAGLAND: Yes.
18 We're really not set up to assist with under 18 at
19 this time.

20 MS. HUGHES: Can I ask a
21 question? You said one pod, I think is what you
22 said, one pod equaled about a pack of cigarettes.

23 MS. ANDERSON-HOAGLAND: Yes, for
24 Juul, yes.

25 MS. HUGHES: And how many pods,

1 are some doing three and four pods a day?

2 MS. KALRA: Yes.

3 MS. ANDERSON-HOAGLAND: Yes.

4 Because it's so smooth to inhale and it is so
5 reinforcing and it's so strong, it is very easy for
6 some people to escalate their use.

7 And you think if you smoke a
8 cigarette, you smoke a cigarette and you put it down.
9 You do something else with your life. That's not how
10 you use an E-cigarette. People are much more
11 intermittent users. You don't have to finish it
12 because it's not burning.

13 So, if you see someone who is
14 using an E-cigarette, they're walking to another
15 building, they vape the whole way there, they put it
16 in their pocket, they do something for five minutes,
17 they come back out, they vape all the way to the
18 other building, they go do something for twenty
19 minutes, they went outside, they vape a couple of
20 times, they go back in.

21 So, just the way the nicotine
22 is being used and the way it's reinforcing of the
23 brain is different than the way traditional
24 cigarettes, conventional cigarettes are.

25 And there seems to be some

1 research coming out that because of that type of use,
2 youth who use E-cigarettes get addicted faster than
3 youth who use conventional cigarettes.

4 MS. HUGHES: My neighbor keeps
5 his on one of the badge things around his neck.

6 MS. ANDERSON-HOAGLAND:
7 Absolutely. That's really common. People, they hold
8 them in their hand all the time.

9 MS. KALRA: And just as a
10 followup question, too - and correct me if I'm wrong
11 - that's why I'm asking this question - the FDA
12 hasn't approved E-cigarettes as a cessation device.

13 MS. ANDERSON-HOAGLAND: No.
14 They are not approved as a cessation device. The
15 evidence for cessation is really mixed right now.
16 It's really mixed and we cannot draw any firm
17 conclusions.

18 MS. KALRA: Michael, I didn't
19 know if you had any stories, you being in the school.

20 MR. FLYNN: It's interesting.
21 Since our last meeting, the Kentucky Cancer
22 Prevention Center has come to my school and met with
23 us and they've rolled in several programs with us
24 coming in in the next few months.

25 MS. ANDERSON-HOAGLAND: Which

1 ones?

2 MR. FLYNN: I knew you were
3 going to ask that. I sent my secretary a message
4 asking that because I've got it all written down on
5 my calendar but it's all starting in May.

6 They're doing some classroom
7 presentations with all of our eighth graders. That's
8 where we see the greatest influx between eighth and
9 ninth grade in my district. Lots of high-schoolers
10 are selling hits off their Juul so that they can pay
11 for their own habits, things of that nature.

12 But, then, they're also doing
13 professional developments for our teachers. There's
14 so many ways that these vaping materials, they all
15 look so different; like, they can hold them in the
16 palm of their hand.

17 We're finding them tucked into
18 where the drawstring comes through your hoodie. They
19 cut the string out and cut that little hole a little
20 bit bigger and it just looks like they're chewing on
21 their collar and actually they're sitting their
22 vaping the entire time. So, she's bringing in a lot
23 of stuff like that to train our teachers on what to
24 be looking for and things of that nature, just trying
25 to curb the issue.

1 MS. KALRA: There's Apple
2 watches out there that are vape products that look
3 exactly like my Apple watch.

4 MS. ANDERSON-HOAGLAND: I've
5 seen one that looked like an asthma inhaler. It's
6 like you think someone is taking their medicine and
7 they're not.

8 MS. HUGHES: Did they introduce
9 the bill in Session this year to try to ban it from
10 all school properties?

11 MS. KALRA: That was last year.
12 In 2019, last Session, there was a Tobacco Free
13 School Campus bill and that did pass. So, it should
14 be in effect.

15 MS. ANDERSON-HOAGLAND: I think
16 there's like two school districts that are holdouts.
17 I think one of them is Madison County, too.

18 MS. KALRA: So, there's 97% of
19 school districts already complying with that bill.
20 And, then, this year, there's the Tobacco 21 bill
21 which is just making sure that the federal law is
22 codified into state law and, then, also removing
23 status offenses from that as well.

24 So, that is just waiting to be
25 heard on the House floor. It has made it through all

1 the other committees and the Senate floor now just
2 one final leg on that. E-cigarette tax is another
3 policy. That actually was in the House budget. It
4 was in the Governor's budget, the House budget and
5 now we're hoping that it's also in the Senate budget.

6 And, actually, an important
7 note is E-cigarettes are the only tobacco product
8 that isn't taxed currently other than the sales tax
9 that's on it. So, that's why it's important to have
10 an E-cigarette tax.

11 MR. FLYNN: It's been
12 interesting listening to all the radio campaigns
13 encouraging people to vote against that tax.

14 MS. KALRA: Oh, really?

15 MR. FLYNN: You've not heard
16 them?

17 MS. KALRA: No.

18 MR. FLYNN: There's one on the
19 radio right now.

20 MS. ANDERSON-HOAGLAND: Is it
21 the magicvaporshop.com guy?

22 MR. FLYNN: I think so. It's
23 talking about how legislators are trying to force
24 people into the cancer-causing agents of tobacco by
25 giving up the safe, healthy option of an E-cig. I

1 mean, that's basically the terminology he's using.

2 MS. KALRA: I've been in
3 committee rooms where I'm about to testify and every
4 vape shop owner is there. It's really comfortable.

5 Well, this was helpful because
6 I know this is something that we've all been asking.

7 Can you send the presentation
8 that you have to us so that way we can get it out?

9 MS. HUGHES: I have it and I'll
10 also put it online on your all's website.

11 MS. KALRA: Well, I didn't even
12 know we had a page. So, that's good to know.

13 MS. HUGHES: Each of the TACs
14 have an individual website. So, we'll put it up
15 there.

16 MS. KALRA: Thank you. We
17 appreciate you being here and all the resources.

18 MS. ANDERSON-HOAGLAND: Thank
19 you all very much and my contact information is on
20 there. So, if you all have any questions, any
21 followup, please don't hesitate to contact me. Thank
22 you all very much.

23 MS. KALRA: Before we move away
24 from this topic, I wonder what the MCOs are hearing
25 as insurance company providers. I'm just interested

1 in getting that perspective because that's a
2 perspective that we haven't heard from when we hear
3 this. We've heard the physician perspective, the
4 school perspective. So, I don't know if anyone wants
5 to chime in.

6 MS. BEAL: So, ironically, two
7 years ago, Passport passed on somebody asking us to
8 sponsor using vaping as a preventative or harm-
9 reduction tool but somebody approached us and asked
10 us to pay for that and we said no.

11 We also have a Health Educator.
12 We have one for one side of the state and one for the
13 other side of the state and they specifically do
14 health education in high schools and middle schools
15 on vaping and that's a free resource.

16 We have a very lovely handout
17 that I created last year that includes some
18 information on vape, so, it's not your traditional
19 tobacco cessation handout for our members.

20 And we're working one specific
21 for teens that we're hoping may come with pediatric
22 psychologists that we're going to make a little more
23 teen friendly. We know teens don't generally want to
24 pick something up. So, we're trying to make that a
25 little more appealing to them.

1 MS. ZACHODNI: And we have
2 similar educational materials, things like that. One
3 of the difficulties, I think, is outreach wise for
4 the teen population in particular. We generally
5 cannot reach out just to the teens. So, we have the
6 ability to text, do all that kind of stuff so we
7 could make the links, but to that conversation under
8 18, our hands are tied there.

9 MS. BOWLING: We've got a couple
10 of members in our case management, our pediatric
11 members that will work with the parents on getting
12 them some resources if they have concerns over that.
13 Then we also have a Prevention and Wellness
14 Coordinator that does go do some of those similar
15 presentations.

16 DR. CAUDILL: I'll say from a
17 dental point of use, the research is showing that are
18 you not only having the damage to the lungs and so
19 forth but now we're finding out it also causes
20 erosion of the enamel of the teeth. And it's not bad
21 enough that Mountain Dew is dissolving our children's
22 teeth away, now we've got vaping doing it, too.

23 Ms. ZACHODNI: Do we know if
24 dental providers -there's like a couple of codes
25 where you can do review and education and things like

1 that, if those are covered codes. I mean, it's just
2 an idea like we're working toward in Indiana because
3 dentists usually see a lot of these populations, too.
4 And if it's an opportunity while they're in the
5 chair, right, and it can be the hygienist or whomever
6 that has that conversation with the teen.

7 DR. CAUDILL: I don't think
8 that's on the Medicaid fee-for-service fee schedule,
9 although it could possibly be done under EPSDT but
10 that's a prior authorization procedure.

11 MS. KALRA: That's a great
12 linkage and connection. Do you know what those codes
13 are?

14 MS. ZACHODNI: D250, one I
15 remember but I don't know for sure.

16 MS. KALRA: The only reason I
17 ask is when we do get a quorum, it might be something
18 that we could bring up to the MAC.

19 MS. ZACHODNI: It's just another
20 way of reaching people.

21 MS. KALRA: Exactly. I mean,
22 like you said, if they're in their mouths already,
23 this is a good way to kind of intersect health and
24 dental together.

25 Do you guys mind sharing any

1 handouts or any resources each of your MCOs has to
2 Sharley so that way it could go out to the members?
3 I think that would be helpful because we have several
4 folks not here. That way they have all the
5 information possible.

6 MS. BEAL: Can you send an
7 official request?

8 MS. HUGHES: You all can't
9 just----

10 MS. BEAL: I mean, I can.

11 MS. HUGHES: Okay. If you can
12 just send it to me, any information you have on the
13 smoking cessation and especially for vaping.

14 DR. CAUDILL: We do have a
15 tobacco counseling code. That's D1320 in the CDT
16 manual, but, again, that one is not in the Medicaid
17 fee schedule.

18 MS. KALRA: That's just a
19 helpful tip. Maybe next time we could bring it up
20 and have a more robust conversation around that.

21 Dr. Caudill, since you're also
22 at the Dental TAC, have they been talking about this
23 at all or this topic?

24 DR. CAUDILL: It hasn't been on
25 the agenda yet.

1 MS. KALRA: Has there been
2 dentists around the state that have been interested
3 or need information or anything that you - just what
4 you're hearing on the ground, what folks might need
5 or see?

6 DR. CAUDILL: Not yet. That
7 article that came out on the erosion and stuff just
8 came out like a few weeks ago. So, it hasn't had
9 time to filter out through the community yet.

10 MS. KALRA: Okay. I'm just
11 trying to think if there's a way that we could work
12 in tandem with the Dental TAC to share information
13 and jointly make that request, if that would help
14 move things forward. Okay. Thank you.

15 So, the next order of business
16 is a discussion on requested data from DMS. I know
17 last time when we spoke, we talked about having some
18 sort of data available to us.

19 I know that Sharley couldn't
20 get all of the data that we've asked for ready for
21 this meeting and I know that she put the request in a
22 month in advance.

23 So, I guess the question is for
24 you, Sharley, what do we need to do to make sure that
25 we do get data?

1 MS. HUGHES: We actually, like,
2 late last night and early this morning, we did get
3 some data. There is some question about the data
4 when Commissioner Lee and I looked at it.

5 So, until we can look at it
6 closer, we did not want to bring it to this meeting,
7 but that data will break down in the age groups of I
8 think it was every five years, like zero to 5, 6 to
9 10, 10 to 15 and up to 21, and it's going to be the
10 number enrolled and we're going to go back and look
11 at the last either three or four years. I think they
12 gave us from 2016 to 2020.

13 And also we're going to look at
14 the number of kids by those age brackets and we're
15 going to even look at it from male or female that
16 have received at least one dental visit - and this is
17 cleanings - the ones that have received two cleanings
18 and, then, one that just received like a dental
19 service other than a cleaning, so, like a filling and
20 so forth.

21 We didn't want to look at just
22 lumping them together because they could have
23 received a dental service and not a cleaning. So, we
24 wanted to look at all three.

25 We're also looking at the

1 number of kids by those same age brackets,
2 male/female that have received any type of vision
3 services. In particular, I believe - I think you and
4 I talked a little bit yesterday afternoon that all of
5 them going into kindergarten, I believe, have to have
6 an eye exam. So, we're wanting to see if we're
7 getting that done.

8 We're also looking at
9 preventive services, same age brackets broken down by
10 male and female and we put the codes in for the
11 preventive services or if they had a diagnosis code
12 or preventive and, then, also the vaccines for
13 children that are in those same age brackets broken
14 down by male or female.

15 And, like I said, I got all the
16 preventive dental and vision and vaccines late
17 yesterday afternoon. I think some of the numbers
18 look low. So, I had sent it out. I don't want to
19 bring any data to somebody that's not right. So,
20 I've sent it out especially to Lee Guice who is over
21 the KCHIP and all that to get her to glance over it
22 to see if she sees anything.

23 But, in the meantime, I sent
24 you all out the CMS 416 forms and I printed you all
25 copies today and I've even printed you out the

1 instructions of what's supposed to be in each of
2 these fields because, quite honestly, I don't know
3 what goes in these fields. Mahak was very familiar
4 with this form when I mentioned the 416. So, you all
5 are probably more familiar with it than I am.

6 MS. KALRA: These are actually
7 the reports that we used to get every year as the
8 Children's Health TAC and we actually spent time
9 analyzing these time to time and had a presentation
10 from DMS every year to report out where kids slide on
11 to these.

12 So, going to that point - I'm
13 sorry for cutting you off.

14 MS. HUGHES: You're fine. We
15 had one that each of the MCOs presented or gave us
16 and, then, there is a combined one that doesn't look
17 quite as nice because we actually pulled it down off
18 of a system and printed it from that. So, it does
19 not look quite as nice and that's the combined all
20 MCOs and fee-for-service.

21 So, if that helps to get you a
22 start on what we're looking at because I know you all
23 are more interested in the kids because it is the
24 Children's TAC. So, there's that data.

25 Once we get all this other data

1 reviewed and provide you all with some summaries,
2 what I'm planning on doing is going ahead and, if
3 it's okay with you all, putting it out on the
4 website, sending it to you all. Then, that way you
5 will have time to evaluate it and see it and we can
6 discuss it at the next meeting.

7 MS. KALRA: Okay. I think since
8 we're just now getting this and some of the folks
9 haven't had time to analyze it, especially since it
10 was sent yesterday, I think if we could have some
11 time looking through this.

12 It would be nice to have some
13 sort of presentation from DMS to actually see
14 what----

15 MS. HUGHES: And that's actually
16 what I plan to do. Our data analytics team does a
17 little summary - they fix it really nicer - it's
18 pretty - the graphs and it will have highlights of
19 the data, like 8% of something or another and 16% is
20 this and what-have-you. So, we'll do that and
21 present it. I'll have more information.

22 What I've got is they have
23 given me the codes they use. When I looked at it and
24 I'm seeing what I think is low numbers, are we not
25 bringing in all the preventive codes? So, I'm going

1 to have a list of the codes that you will be able to
2 look at to see what we've actually included in it.

3 So, we plan on doing a better
4 job. I will tell you. I'm new to doing data for
5 Medicaid. It's not simple because you've got to know
6 what's in that data base thing in order to really be
7 able to pull that data up.

8 The lady that was pulling the
9 preventive and all that information, she called me
10 late Friday and said I'm going to get it to you
11 Monday. We'll have a discussion Monday morning. Her
12 daughter had a bad wreck on Sunday afternoon and
13 she's out for the week.

14 MS. KALRA: We understand things
15 come up. I think on our perspective as a TAC, we
16 have been requesting data for over a year now and we
17 haven't consistently even - we actually haven't
18 received any.

19 MS. HUGHES: You haven't
20 received any data since I've been involved with the
21 TAC. No, you have not.

22 MS. KALRA: So, I think that's
23 where we are. It gets frustrating because we don't
24 know what to recommend if we don't know where we are.
25 We can't measure anything.

1 MS. HUGHES: And that's a change
2 in the Administration. The previous Administration
3 did not want to release it. Lisa is the one that
4 says how can we expect them to make recommendations
5 if we don't provide them data. All the TACs are
6 going to start getting data from us.

7 MS. KALRA: Great. That's very
8 exciting and that's something that we've all been
9 craving and wanting.

10 MS. HUGHES: And while I'm
11 blabbering, I've also given you all a copy, and
12 there's some extra copies here for anybody, two
13 provider letters that we are sending out today. One
14 is to the waiver providers and basically how they can
15 go about continuing to provide care to the waiver
16 members during the COVID-19 process.

17 And, then, we have one to all
18 providers where we are waiving the copays, prior
19 authorizations on all this stuff or anything COVID-
20 19-related.

21 I sent these to you all this
22 morning but I didn't know which of you all traveled
23 the farthest and didn't know if all of you had had a
24 chance to see it. We provided the diagnosis code
25 which is the actual diagnosis, a possible exposure or

1 an actual exposure.

2 So, if a Medicaid recipient
3 goes to the doctor and says I think I've been
4 exposed, he can use that diagnosis and submit it and
5 there won't be any copays incurred or anything like
6 that.

7 So, I just wanted to get you
8 all that information to you today also, and that's
9 being put on our website.

10 And I provided you the COVID-19
11 website for Kentucky that's being updated and it's
12 got some good information there. There's actually a
13 link from there to the CDC that goes into a lot of
14 detail about how providers and advocates caring for
15 patients, stuff that they can do to keep themselves
16 safe.

17 MS. KALRA: That sounds great.
18 Thank you.

19 Going back to data and I just
20 want to pick your all's brain on what data would we
21 like to see regularly and what data we would like to
22 see annually, knowing that that's been something that
23 we do want but spelling it out for Sharley so that
24 way every single meeting, we at least have something
25 to review and talk about.

1 So, I have a list of what I
2 thought though, looking back in the previous years
3 that we've had data and seeing what makes the most
4 sense, and I just wanted to run this by you all and
5 see what you all think we need to add to this.

6 So, number of children
7 enrolled, that's something that we want to see
8 regularly; new enrollees; numbers of disenrollees;
9 enrollment by race, gender and ethnicity.

10 We used to get an MCO monthly
11 comparison dashboard. I don't know if that's even
12 possible but that's something that we've gotten in
13 the past several years.

14 MS. HUGHES: What type of data
15 was on that?

16 MS. KALRA: It was basically a
17 dashboard that had every single MCO and the
18 enrollment numbers, the disenrollment numbers, new
19 enrollees. It also had foster care.

20 MR. FLYNN: Foster care
21 disenrollment, disenrollment based on address.

22 MS. KALRA: Yes. We also had
23 appeals and grievances and we did have it broken out
24 in age groups. The age groups were under 1, 1
25 through 5, 6 through 12 and 13 through 18. And,

1 then, we did receive the CMS 416 data every year and
2 had a presentation on that.

3 MS. HUGHES: Was all this other
4 every meeting?

5 MS. KALRA: Yes. So, all of
6 that was every meeting and, then, the CMS 416 was
7 once a year.

8 MS. HUGHES: And you want it
9 still just for kids?

10 MS. KALRA: Yes, up to age 21.

11 MS. HUGHES: And is this
12 basically still the same data you sent me yesterday
13 afternoon?

14 MS. KALRA: I think so. I think
15 it might be the same thing that I sent you yesterday
16 but I could double check.

17 Is there anything else that you
18 all could think of that we would want to see or want
19 data-wise?

20 MR. FLYNN: I don't think so.

21 DR. GRIGSBY: Because that's
22 typically what you were getting.

23 MS. KALRA: Yes. I was just
24 basing it off of the old emails that we used to get
25 and that was helpful because we could then pinpoint

1 what are the issues and then what are the solutions.

2 MS. HUGHES: That's why I was
3 wanting to look at like preventive and the dental.
4 We did see even on the 416, you see as they get
5 older, and I don't know personally - I don't have
6 children, so, I don't know personally. Did you see
7 less because there's not as many required services
8 for the older but they still should be going in for
9 at least an annual physical, but we did see and even
10 looking at the 416 that as the age increases, they
11 tend to not go as regularly.

12 DR. GRIGSBY: The great majority
13 of the visits are in the first three years of life
14 and, then, it sort of tapers off.

15 DR. CAUDILL: Did you ever look
16 at that data from a POS point-of-view and see if
17 maybe some of the school programs, the mobiles and
18 portables going in are influencing that and they
19 concentrate on the younger kids?

20 MS. KALRA: We did not.

21 DR. CAUDILL: You might want to
22 look at it.

23 MR. FLYNN: What's the question?

24 DR. CAUDILL: Something that
25 might skew those results is the mobiles and portables

1 from the dental point-of-view anyway and also vision.
2 They're going in to schools and they concentrate
3 normally on the younger kids. So, therefore, these
4 kids may be seen by these and get more preventive
5 services at a younger age; but as they get older,
6 they're not being seen by these groups and there's
7 quite a few of them throughout the state.

8 MR. FLYNN: We had some pretty
9 in-depth conversations on that a couple of years ago
10 because my concern was that the dental clinics were
11 coming in doing basic cleanings and the children were
12 getting no followup services based on the findings of
13 those cleanings.

14 So, if they needed any kind of
15 restorative work, it just wasn't happening because
16 they were checking in, getting the easy, quick
17 cleaning done, sealants done and then they were
18 leaving and, then, those kids had no followup
19 services.

20 DR. CAUDILL: And that's been
21 changed.

22 MR. FLYNN: Yes, and that's what
23 I was saying. We talked about that pretty in depth.

24 DR. CAUDILL: We put some severe
25 criteria in.

1 MR. FLYNN: And it's been much
2 better since those changes have come around.

3 MS. HUGHES: And even with the
4 Free Care Rule because now they're going to be able
5 to bill those Medicaid recipients. Even if they
6 don't have an IEP, they can still bill them. So,
7 that will help also with showing more numbers.

8 MS. KALRA: And as we speak, a
9 Senator is texting me about the Free Care Rule. So,
10 that was a good segway. Great.

11 So, I think with that list,
12 that might be helpful for Sharley to just make sure
13 that we get that prior to the Children's Health TAC
14 meeting so that way we could analyze on our own and,
15 then, come back here and have a more robust
16 discussion, if that makes sense.

17 MS. HUGHES: Yes. And like I
18 told you yesterday, once we get them set up, once we
19 get the reports created, then, all I will have to do
20 is go in and just push a button and it re-runs the
21 report. So, after the first time we do them, it
22 won't be a problem with getting them easier.

23 MS. KALRA: Awesome. And I will
24 send you this again electronically so that way you
25 have that.

1 MS. HUGHES: I've got your email
2 from yesterday. So, if it's the same, I can go back
3 and look at that.

4 MS. KALRA: Let me just double
5 check to make sure so that way you have it, and it
6 might be helpful if I just put it in a document for
7 you and not just an email so that you don't have to
8 always search for that email and search for that
9 document.

10 MS. HUGHES: Okay.

11 MS. KALRA: Any roundtable
12 updates or concern from professional organizations
13 that we need to think through or discussions that you
14 all have within your organization regarding Medicaid?

15 DR. CAUDILL: I have something.
16 You were asking about the Dental TAC earlier. We did
17 push through - and this affects children directly -
18 that children in braces can now get a cleaning and
19 fluoride every three months instead of every six.

20 We were having a problem with
21 orthodontists leaving braces on children too long
22 that were not getting proper PCP care as far as their
23 dentist and their dental home and basically decaying
24 their teeth out to the point that some of these
25 children actually ended up in dentures after they got

1 their braces off which is horrible.

2 And I've had to have peer-to-
3 peer meetings with doctors before and say it's better
4 to take the braces off and have crooked teeth than no
5 teeth at all, and their response was kind of, well,
6 yeah, but they've got their one shot here and I was
7 trying to nurse them along and get it done.

8 I said, yeah, but you can't do
9 that and I didn't want to be bad-mouthed and be the
10 bad guy that took the braces off.

11 So, in our TAC meeting, Heather
12 Wise headed up our committee and she and I pushed it
13 through to kind of, number one, give the doctors an
14 out by saying these are the clinical guidelines we
15 recommend now as a committee so that the doctors
16 could point to this and say, okay, you have three
17 strikes and you're out.

18 If they come back for three
19 visits and plaque is everywhere, decay, white spots,
20 the teeth are basically rotting, we're going to take
21 the braces off and stop.

22 And that gives the doctors an
23 out, number one, and, then, number two, under EPSDT
24 which also gives us increased frequency, we can now
25 cover that extra prophylaxis and extra fluoride treatment

1 - not an extra exam, but cleaning and fluoride every
2 three months because we feel it is medically
3 necessary to do that if they've got braces on their
4 teeth which makes it much more difficult to clean
5 their teeth and a much higher chance of decay.

6 So, we did get that pushed
7 through, and speaking for Guardian and Avesis, our
8 four plans did that and, then, finally DentaQuest
9 came on board with Anthem and they agreed to do it
10 also. So, all five plans are doing it now.

11 MS. KALRA: Great. That's
12 excellent. Do you mind sharing that, whether if it's
13 a guidance letter or whatever you all have.

14 DR. CAUDILL: It was a
15 recommendation from the TAC to the MAC but we all
16 went ahead and instituted it.

17 MS. KALRA: Okay. It would be
18 good to have that.

19 DR. CAUDILL: Because under
20 EPSDT, we look at it for medical necessity, and if it
21 meets that criteria, we're going to approve it.

22 MS. KALRA: Okay. Great. That
23 should definitely be sent out to folks who are a part
24 of the Children's TAC.

25 I don't know if others have any

1 information?

2 DR. GRIGSBY: I reached out and
3 neither the Executive Director nor the president
4 really could think of anything that was pressing that
5 we needed to discuss right now.

6 MR. FLYNN: Nothing here.

7 MS. KALRA: Sounds good. On
8 that note, Old Business.

9 MS. HUGHES: You missed a
10 couple.

11 MS. KALRA: Oh, what did I miss?
12 Sorry. Topics for 2020. We have other topic ideas -
13 CBD, vaccines, school safety.

14 I wonder if we should continue
15 the conversation on vaping just because we do have
16 some sort of action item, knowing that the Medicaid
17 fee schedule, adding the D1320 to that, that could be
18 a recommendation. And, then, also, we could have a
19 more robust conversation about either of these three
20 topics.

21 So, I don't know if you guys
22 have a preference.

23 MR. FLYNN: I don't have a
24 preference.

25 DR. GRIGSBY: No. I think

1 vaping is going to be something that unfortunately
2 we're going to be dealing with for a little while.

3 MS. KALRA: So, maybe we could
4 at the next meeting have a more robust conversation
5 about what other ways can we attack this problem that
6 are administrative policies, look at that.

7 And hopefully by that time, we
8 will have more folks in the room and, then, also have
9 the presentations out to them that they could read
10 and at least follow up with to be more well aware of
11 this situation. So, we'll have that as a
12 conversation.

13 Updates on the MAC. I did not
14 attend the MAC because that was our Advocacy Day, as
15 I told you. So, I don't know if there is anything.

16 MS. HUGHES: That seems like
17 it's been a long time ago because I took a week's
18 vacation during that time.

19 I don't think there was a lot.
20 Rather than the TACs making their comments at the
21 meeting coming up on the 26th, if it's continued to
22 be held, we are going to have - I think this is the
23 one where we have it's either two or three of the
24 MCOs will be doing a presentation, one in May and the
25 rest of them will do a presentation.

1 We are going to start doing
2 small presentations to each of the TACs where you
3 have in writing the highlights of what's going on in
4 the Department. So, we're going to start that up.

5 At the meeting, Lisa was there
6 and had been there maybe three or four days, and
7 there's really not been a lot of changes, negative
8 changes since the new Administration came in.

9 There's been some positives
10 such as providing data and being more transparent.
11 So, I think going forward, at least for the next few
12 years, we should be doing a little bit better of
13 being more transparent and providing more
14 information.

15 The next MAC meeting was
16 scheduled to be held here at Public Health. I
17 received notification that that conference room,
18 we've been booted out.

19 So, I am now in the process of
20 trying to find another room. The Annex was not
21 available. That's why we were meeting over here.
22 This room is now being used for nothing but COVID-19
23 meetings with Public Health. So, they don't want
24 anybody scheduled there.

25 So, I am going to go meet

1 someone at the Bluegrass Community Action Agency
2 Partnership which is, if you go past Cracker Barrel
3 out here on Versailles Road and go back in through
4 there. I'll send everybody the address if that's
5 where it will be held, but just be aware that the
6 location is probably going to change for the MAC
7 meeting.

8 MS. KALRA: Just for the
9 upcoming meeting.

10 MS. HUGHES: Just for the
11 upcoming meeting. And be aware that at anytime, it
12 could also be cancelled, depending upon COVID-19 as
13 well.

14 MS. KALRA: Okay. Sounds good.
15 Great. Thank you. We did the roundtable updates.

16 Old Business. I wanted Alicia
17 here with KYA, my colleague, to talk about what she
18 has dug into Free Care. This was actually a part of
19 her internship and it's something that she dug into,
20 learned about best practices.

21 So, I'm going to let you all
22 hear from her for a minute because you guys are the
23 on-the-ground folks that will probably see this
24 implement and she has learned some great best
25 practices from across the state.

1 MS. WHATLEY: So, like Mahak
2 said, my name is Alicia Whatley. I am now with
3 Kentucky Youth Advocates but I'm also working on a
4 master's in social work, so, I'm also in school and
5 doing some projects for that.

6 So, this is just a document
7 that I put together with some of my research that
8 I've done about Free Care. So, I have looked into a
9 few different things regarding the history of why
10 Free Care is now available, Kentucky going ahead and
11 getting that approved and, then, looking at
12 literature about outcomes that we can expect for
13 kids, if we are implementing Free Care correctly in
14 schools, talking to stakeholders across the state
15 that are interested in this and that have been
16 involved in the planning process and kind of their
17 perspective and, then, also looking into other states
18 that have already implemented and how they're doing
19 it and how they're getting information out in the
20 state.

21 So, there is a time line up in
22 the top left there that kind of tells you when
23 federally this became available. It was back in
24 2014. In April of 2019, Kentucky submitted their
25 State Plan Amendment asking to be able to provide

1 Free Care in schools and that was approved in
2 November but it was backdated to August 1st.

3 So, everyone should probably
4 already know that but just a refresher. There's also
5 an explanation of what Free Care is here if you don't
6 know a lot about it, but it's expanding services,
7 health care services that can be provided in the
8 schools, like Sharley mentioned, beyond just those
9 IEP kids that have those plans.

10 So, now, any kid receiving
11 Medicaid can receive services in school and a
12 licensed provider can bill for that.

13 I do think it's important to
14 circle back to why it's really important in Kentucky
15 to have Free Care. So, there are some rankings here
16 nationally. Kentucky in health is 25th in the
17 nation, education 27th and overall child well-being
18 we're 34th.

19 So, obviously we can see
20 there's some room for improvement in all of those
21 categories, and we think that the Free Care Rule will
22 have the potential to impact all of these numbers and
23 hopefully move us up in some of those rankings as a
24 state.

25 And, then, there's also an

1 explanation of some of the outcomes that have been
2 found in other states and in the literature about
3 what health care in schools can do for kids.

4 So, one thing that we know is
5 that, yes, their health outcomes might improve and we
6 might see, like, less risk behaviors. We might see
7 improvements in specific health conditions,
8 understanding of their own treatment. So, things
9 like asthma or diabetes that are chronic needs that
10 they continuously have to take care of, kids might
11 understand that better and be able to help their own
12 treatment, but, in addition, we also see academic
13 outcomes.

14 So, it's really important to
15 note that those are linked and that if kids are not
16 healthy, they're not learning. And, so, it's really
17 important to get them healthy before they're able to
18 learn optimally in school.

19 Like I said, I have looked at
20 other states as well. A couple of states that have
21 put out really nice toolkits that are available
22 online - Ohio, Michigan, Colorado and Massachusetts -
23 and there's pretty wide range all over the country
24 that have been doing this.

25 So, from that research, talking

1 to a lot of stakeholders across the State of
2 Kentucky, I've come up with some recommendations
3 which are on the back there of what needs to happen
4 from here on out. Some of these things are already
5 happening to some extent and some of these just need
6 to be expanded on.

7 So, the biggest thing is
8 communication among the main players in a state that
9 are implementing this. So, the bare minimum is going
10 to be the Cabinet for Health and Family Services, DMS
11 and, then, KDE. Those bodies are already talking to
12 each other but they need to be continuously talking
13 and implementing things together.

14 And, so, instead of having
15 pieces of information coming from each body, we need
16 to just have like comprehensive information that's
17 coming together. That's going to be really important
18 because a lot of people across the state are going to
19 who they know for information.

20 And, so, if we're not having
21 the same information from each person, then, it's
22 going to be very confusing and hard to implement.

23 One consideration that I think
24 we should be looking at is having like one landing
25 page on the Internet for all of this information to

1 be. So, whether it's linked on all three of those
2 people's websites or however that might look, but
3 instead of each of them having random pieces of
4 information about Free Care on their websites, we
5 need to have one comprehensive place that people can
6 go for information.

7 I know that they have been
8 working on some like technical assistance guides and
9 things like that. So, having that in one place and,
10 then, just having everybody direct to the same
11 location for that.

12 Another note is that those
13 three bodies that I mentioned are kind of the bare
14 minimum. There might be other people that need to be
15 brought in. An example of that is entities that are
16 vendors for billing within schools now. So, there
17 are vendors that are helping with billing for the
18 kids that have IEPs in all the public schools.

19 So, those people might need to
20 be brought to the table as well. So, that's going to
21 be up to those three bodies of who they need more
22 expertise from and more answers from. So, that's the
23 first two things there.

24 The next thing is going to be
25 ongoing support. So, some of the themes that I found

1 from my interviews is that there's going to be a lot
2 of questions. There already are a lot of questions
3 that have not been answered, so, specifically about
4 Medicaid processes and billing because schools are
5 going to be implementing new billing procedures.

6 So, somebody is already billing
7 Medicaid in almost every public school because kids
8 on an IEP are using that system; but if we're
9 expanding to so many more students, the schools might
10 need to put in new positions of people that are
11 helping with those billing procedures or new
12 practitioners in a lot of cases.

13 And, so, there might be some
14 need for support around that, around the training of
15 their current people that are in place, around
16 changes that are going to happen and processes in the
17 school.

18 There's been a lot of questions
19 about HIPAA regulations for the health pieces but
20 also FERPA within the schools and how do those
21 interact, how can those talk to each other or not
22 talk to each other in some cases. And, so, there
23 needs to be some guidance around that.

24 I've seen other states do a
25 really good job of explaining some of the legalities

1 that go into that. Colorado has a great guide about
2 how HIPAA and FERPA are different but also how they
3 can work together to work inside school systems.

4 And, then, another big issue or
5 a concern that I've heard is continuity of care for
6 students. So, this needs to be thought about before
7 we start providing care. If kids are getting care in
8 the schools, what happens when they go home and who
9 is that provider?

10 So, if you're seeing, for
11 instance, when we talk about mental health care in
12 the schools, if you see your therapist at school and
13 that's consistent, that's great, but, like, you go
14 home. You have weekends. You have breaks. You have
15 summer. You might be out of school for COVID-19.
16 Like, there's times when you're not in that school
17 building.

18 And, so, it's a question of who
19 is that person that you're going to go to when you
20 have a crisis when you're not at school?

21 So, making sure that we maybe
22 think about that before we hop in and start
23 addressing these concerns for the kids is knowing who
24 they can go to when they're out of school and, then,
25 understanding there are a lot of regulations around

1 how many providers you can see in a day when you're
2 billing Medicaid.

3 So, knowing if we are at school
4 seeing one provider, can they also see another
5 provider and where that is going to lie, kind of
6 defining all that out and that's going to be
7 something that people are going to have ongoing
8 questions about.

9 So, we need to have a really
10 clear path of support for schools to be able to go
11 and say, like, I need help with this and knowing who
12 they can go to.

13 In addition, I think that any
14 information that goes out, it's helpful to target it
15 to certain people. So, saying here is information
16 that's for district professionals, here's information
17 that's for school faculty or teachers to understand
18 it better, here's information for your parents to
19 understand what's going to happen in the schools and,
20 then, here is a provider version of what we're
21 putting out, so, kind of targeting to different
22 audiences so that everyone is getting the information
23 that they need, and that might look different for
24 different professionals in the school system.

25 And, then, finally, I think the

1 evaluation is going to be really important. So, this
2 is very new to Kentucky. This is something that's
3 going to be changing and hopefully growing over time.
4 So, continuing to reconvene those three main bodies
5 and anybody that they are drawing on for support and
6 continuing to have those meetings.

7 Instead of saying, okay, we've
8 now implemented, we're done, we need to be coming
9 back together on a consistent basis and saying like
10 how are we doing, how is it working, what are the
11 outcomes and, then, improving upon that every time
12 that we're able to come together and talk about it.

13 So, that's just a quick
14 overview of a lot of research that I have been doing
15 and a lot of things that I've looked into.

16 A lot of people in the room are
17 probably pretty familiar with the Free Care process
18 hopefully and what's going to be coming. Does anyone
19 have questions?

20 DR. GRIGSBY: I know this is a
21 ton of work that you've done over many months all on
22 two pages.

23 MS. WHATLEY: It was, yes. It's
24 hard to fit it all in sometimes.

25 DR. GRIGSBY: So, thank you for

1 that. That's a very nice summary.

2 MS. WHATLEY: Thanks.

3 MS. KALRA: Awesome. Thank you.

4 So, we don't have any data requests or reporting or

5 questions. I don't know if the MCOs have updates. I

6 know we didn't request anything. So, if you guys

7 have something that you are burning to say. That

8 looks like a no.

9 I think general governance we

10 kind of talked about having more members engaged and

11 involved earlier.

12 Is there any other business? I

13 guess we will adjourn. Thank you.
